

CHECKS DONE BY ALFA ON VIDEOS (June 2019)

Alfa checks each rule individually, always starting at the entry point on the top left. Nemo stores answers so that the same question is not asked several time in PFG. Each atomic rule only ask 3 or 4 questions, the first 2 always being the same, but composite rules require up to 5 individual questions on top of the initial 2. PFG is mostly concerned in meeting WCAG requirements and thus mostly shows the composite rules.
